

# Think Like a Farmer

1. Don't shout at the crops.
2. Don't blame the crops for not growing fast enough.
3. Don't uproot the crops before they have had a chance to grow.
4. Choose the best plants for the soil.
5. Irrigate and fertilize.
6. Remove weeds.

7. Remember you will have good seasons and bad seasons - you can't control the weather only be prepared for it.
